

Concrete Paving

The Miller Group
Miller Paving Limited

millergroup.ca

Miller Paving Limited is at the forefront of the growing demand for concrete pavements. With modern equipment and in house materials we are prepared for all types of concrete pavement applications.

Concrete paving is an economical method of producing concrete base and driving surfaces where extremely high loads are anticipated. This product is popular for freeways, airports and large shipping yards or any other application where a very large slab is required.

The Miller Group's mobile concrete plant can be employed in conjunction with any of our fleet of pavers for high production work where high volumes of concrete are not otherwise available. This also allows delivery through the use of conventional tri-axle trucks due to proximity.

Our versatile pavers can handle pass widths up to 30 feet with a variety of finishes. Rebar and load transfer devices can be incorporated in the slab as required to produce structures which can withstand decades of use.

The Miller Group is your commitment to excellence
