

# Dolomite

The Miller Group  
E.C. King Contracting Limited

millergroup.ca

Dolomite is a processed limestone product from our mabel formation quarry. Dolomite is used in the agricultural industry as fertilizer filler and soil neutralizer, the manufacturing of glass, and in stone mastic asphalt mixtures. Dolomite has a slightly different chemical configuration from normal limestone which makes it a unique aggregate.

---

The dolomite plant crushes and separates fine crushed limestone from our Sydenham quarry into 3 sizes for the 3 main products:

Fertilizer grit

Material used in the manufacturing of glass

Material used in stone mastic asphalts

and as a treatment to adjust soil PH levels

With it's high alkalinity Dolomitic Agricultural Lime is used to help lower PH levels in the high acidity lake water in northern Ontario.
