The Miller Group

Miller Cement Limited - A division of Miller Paving Limited

millergroup.ca

Miller Cement Limited supplies bulk Type GU normal portland cement, Type S slag and specialty cements to ready mix and precast concrete producers across southern and central Ontario via pressurized bulk tanker trucks.

All cementing materials supplied by Miller Cement conform to the physical and chemical requirements of CSA A3001-03.

Miller Type GU (General Use) normal portland cement is a general purpose hydraulic cement designed for universal applications.

Specialty cements such as Type HE (high early) and Type GUB-8SF blended hydraulic cement are designed for more specific performance characteristics in concrete.

Miller Type S ground granulated blast-furnace slag is a supplementary cementing material that is used as a partial replacement for portland cement to enhance the properties of concrete.

Professional technical services are available to customers, specifiers and owners regarding the proper application of Miller cement products.
